
1. Triage
    1. What's the big picture of what's being asked?
    2. Generally, at a high leve, what resources will be needed?
    3. is it simple? use Quick agent. Is it super-complex? use Opus
2. Plan
    1. Check procedural memory. Has this been solved? If so, bring that in.
    2. Call planning agent to figure out the steps needed to accomplish the goal
    3. Ask a Tool agent what it can help with.
    4. Will other things be needed outside of model reasoning and available tools?
        1. Yes? Call a tool-builder agent?
    5. Do we have everything needed now?
        1. No -> repeat call tool agent or go back to planning agent.
3. Execute
    1. Work through the steps
    2. There will be "Evaluation" steps. If they fail, back to planning agent.
    3. Check results
        1. All good? Format the answer and return it to the user!
        2. No? Go back to the planning agent.
